PROFESSIONAL SUMMARY

Software engineer with 3+ years of production experience building full-stack applications, APIs, and data workflows. Experienced with React/Next.js, Ruby on Rails, PostgreSQL, cloud deployment, production debugging, and root-cause analysis; completing a B.S. in Computer Science at UNLV in Dec 2026.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Ruby, SQL, Java, C++
Web / Backend: React, Next.js, Node.js, Express, Ruby on Rails, PHP/Symfony, REST APIs
Data / Cloud: PostgreSQL, MariaDB, Supabase, AWS S3, Vercel
Engineering: Git, GitHub Actions, CircleCI, CI/CD, feature flags, code reviews, root-cause analysis

PROFESSIONAL EXPERIENCE

Software Engineering Intern | RebelHacks (UNLV Software Engineering Club) Oct 2026 – Present
- Migrated hackathon participant registration from Next.js to Symfony/Twig, adding .edu email validation and a PDF résumé-upload field in server-rendered forms.

Contract Software Engineer | HomeSavvyDeals.com Nov 2025 – Present
- Built a configurable product-selection feature using Next.js and Supabase/PostgreSQL; launched with a 30% affiliate mix and became a top-five most-clicked site feature.
- Implemented search-intent classification, database views, and Supabase RPCs to support product discovery; deployed and troubleshot live application changes through GitHub and Vercel.

Specialist, Command Center Workflow | MGM Resorts International Jun 2025 – Oct 2026
- Analyzed staffing and service metrics and coordinated time-sensitive scheduling, incident, and cross-functional operational workflows for a 24/7 hotel environment.

Software Engineer | Silversheet (acquired by AMN Healthcare) Jan 2019 – Nov 2021
- Built provider enrollment and PDF automation with Ruby on Rails, React, PostgreSQL, and AWS S3, replacing mailed forms that could take two weeks with a digital review/signature step taking as little as five minutes.
- Completed 20+ root-cause analyses and shipped production fixes through code review, CI/CD, and feature flags; supported frontend, backend, and relational-data workflows.

SELECTED PROJECTS

Autonomous Vehicle Racing (UNLV F1Tenth) | Python, ROS 2 2026
- Developed autonomous driving logic and tuned control parameters for a 1/10-scale race car, improving fastest lap time by 27% (19.47 seconds to 14.23 seconds).

H.O.S.T. – Hotel Operations Service Ticketing | Node.js, Express, PostgreSQL
- Built a role-based service-ticketing application with REST APIs, JWT authentication, dashboard search, and relational ticket workflows.

EDUCATION

University of Nevada, Las Vegas (UNLV) | B.S. Computer Science Expected Dec 2026
Relevant coursework: Data Structures and Algorithms, Operating Systems, Database Systems, Cloud Computing, Information Assurance
